Profile

I am a Full Stack Developer with strong expertise in building and designing high-performance, interactive web applications. With extensive experience in modern front-end technologies and back-end development, I am dedicated to delivering seamless, scalable, and user-centric solutions. On the front end, I specialize in crafting engaging user experiences through responsive design, accessibility standards, and performance optimization. On the back end, I am proficient in designing and integrating RESTful APIs, working with relational and non-relational databases, and implementing authentication and security best practices. My skillset includes working with modern JavaScript frameworks, state management tools, and server-side technologies to deliver maintainable and robust applications. Constantly staying up-to-date with the latest industry trends, I strive to integrate innovative technologies that enhance efficiency, scalability, and interactivity across the entire stack.
